Ethernet

Five-bay ethernet cradle for Opticon OPH-1005/OPH-1004 (*1)

- accommodates up to five OPH1005's and/or OPH1004's;
- only one power outlet necessary;
- desktop/shelf usage;
- ethernet connection on backside;
- elegant and industrial design;
- clean up all those loose power adapters and ethernet cables behind your cradles.

(*1) Barcode terminal(s) NOT included.

The CPH-5 incorporates five Opticon CRD-1004-Ethernet cradles into one functional design.

Elegantly shaped, yet robust for everyday usage this cabinet houses all components for easy operation. Just one power outlet necessary for charging on all positions and an optional ethernet cable for communication.

On the back the ethernet connection is positioned inside a chamber. This makes it possible to place the CPH-5 directly against the wall even when the ethernet connection is used.

The design will let you queue up as many CPH-5's as you need while visually maintaining the perspective of one big multi-cradle. The spacing between the cradles also ensures easy inserting and extraction of the terminal, even when adjacent cradles are occupied.
